	Application: At least, One application per day on eyes area for 1 week. Eyes area
	Study date: 29th August ~ 5th September, 2025
	Objective: The objective of this study was to explore the efficacy of the investigational products.
	Assessment method: - Questionnaire: product efficacy, performance and skin perception. Evaluation time points: - Questionnaire: Week 1 (after 1-week application)

Studied population:

44 female subjects, ranged in age from 21 to 59 completed the 1-week study.

Main inclusion criteria:

1. Were Chinese female, aged 18 years old and over;
2. Were in general, good health and good mental state;
3. All skin types (dry, or mixed dry skin, normal skin, oily or mixed oily skin);
4. Any Fitzpatrick types;
5. Were regular user of products of the same type as the investigational product;
6. Were willing to read, understand and able to sign the Informed Consent Form;
7. Were willing to comply with all study protocol requirements;
8. No disagreement of dermatologist because of other reasons that exclude the participation of the subjects.

◆ **Results on Questionnaire:**

◆ **Diary log:**

After 1-week repeated applications under normal conditions of use (EYE PALETTE: At least, One application per day on eyes area for 1 week), no subject reported discomfort in diary log.

1. OBJECTIVE

The objective of this study was to explore the efficacy of the investigational products.

2. STUDY DESIGN

2.1. Experimental plan

This was a single center and home-use design of study.

Protocol, study execution, data analysis, and report followed the main principles of Good Clinical Practice (GCP) CHINA 2020 issued by National Medical Products Administration (NMPA). The organization and implementation of testing accords with the Declaration of Helsinki.

2.2. Population and grouping method

Totally 44 healthy female subjects were enrolled and all of them completed this 1-week study.

2.2.1 Inclusion criteria

Subjects:

1) Were Chinese female, aged 18 years old and over;
2) Were in general, good health and good mental state;
3) All skin types (dry, or mixed dry skin, normal skin, oily or mixed oily skin);
4) Any Fitzpatrick types;
5) Were regular user of products of the same type as the investigational product;
6) Were willing to read, understand and able to signed the Informed Consent Form;
7) Were willing to comply with all study protocol requirements;
8) Had no disagreement of dermatologist because of other reasons that exclude the participation of the subjects.

2.2.2 Exclusion criteria

1) Had a history of reactions to products of the same type as the investigational product;
2) Had changed the cosmetics used in the past 1 month;
3) Intended to get pregnant, be pregnant, be lactating, be within 6 months of delivery or be unwilling to take necessary precautions to avoid a pregnancy;
4) Had used antihistamine drugs in the past 1 week or immunosuppressants in the past 1 month;
5) Took anti-allergic drug/injections in the past 1 month;
6) Had allergies, allergic dermatitis or skin disease;
7) Had sensitivity or even allergy to topical products, ingredients or fragranced products;
8) Had history of suffering from skin diseases (such as psoriasis, eczema, skin cancer, etc.);
9) Had used any anti-inflammatory treatment on the test area within 2 months prior to this study starting date;
10) Had a chronic medical condition that may interfere with testing (e.g., asthma, insulin-dependent diabetes, lupus, rheumatoid arthritis or other immune/auto-immune diseases);
11) Had received cosmetic medical procedures on the face (such as injectable anti-wrinkle products, cosmetic surgery, tattoo removal, home light facial procedures or home use medical devices, etc.) in the past 1 month;
12) Had excessive sun exposure or ultraviolet light in the past 1 month;
13) Had applied Alpha hydroxyl acid, ortho-hydroxybenzoic acid, hydroquinone in the past 3 months; or used prescriptions (such as antibiotic, retinoids, alpha hydroxyl acid and steroid), oral contraceptives (such as Diane 35®, Jasmine®, Holgyeme®, Syndi 35®, Regulon®);

14) Avoided providing emergency contact;
15) Subjects that were not compliant to the selection criteria or not proper for participation as determined by Principal Investigator
16) An employee of cosmetic companies or Shanghai China-Norm Quality Technical Service Co., Ltd.

2.3. Study flow chart

Table 1. Activities Table

Activities	V1 Baseline	V2 Week 1
Sign in at the front desk	X	X
Written informed consent	X	/
Inclusion / non-inclusion criteria (Primary eligibility)	X	/
Medical history	X	/
Final eligibility	X	/
Questionnaire	/	X
Distribute investigational products	X	/
Diary log feedback	/	X
Retrieve investigational products	/	X
Check product	/	X
AE/SAE report	X	X
End of study	/	X

All the measurements were conducted under the conditions with a well-controlled room temperature (21°C±1°C) and humidity (50%±10%).

2.4. Methodology

2.4.1 Questionnaire

The questionnaire of product efficacy, performance and skin perception was answered by subjects according to the 4-points scale (Grade 1-4, "1" Disagree, "2" Disagree somewhat, "3" Agree somewhat, "4" Agree) at Week 1 (after 1-week application).

Application Frequency: At least, One application per day on eyes area for 1 week.

3.2. Product storage

Study products must be stored in sealed plastic containers at room temperature. All used and unused study products will be appropriately inventoried by China-Norm.

3.3. Product usage instruction

Under normal conditions of use, at least apply the product once a day. Apply the product on the eyes area with brush.

For a natural look:

1. Using the foam applicator, apply the medium shade to the entire eyelid to open up the eyes.
2. Then apply the darkest shade along the lash line to define the eyes.
3. Brighten and enlarge the eyes by applying the lightest shade under the brow bone and in the inner corner of the eye.

And also the 2 other shades.

For a sophisticated look:

1. Using the foam applicator, apply the medium shade to the entire eyelid to open up the eyes, then the darkest shade along the lash line to define the eyes.
2. Blend all over the eyelid and outwards using the blending brush.
3. Highlight by applying the lightest shade under the brow bone and in the inner corner of the eye with the foam applicator, for even more intense contrast and a structured look

And also the 2 other shades.

4. STATISTICS METHOD

4.1 Data entry and check

Data entry was performed by using Excel (Microsoft®). The statistical analysis was performed by the certified and trained statistician.

4.3. Demographic

Descriptive statistics were performed on per protocol population and were provided for all demographic and baseline characteristics:

- Age
- Gender
- Skin types (dry, mixed-dry, normal, oily or mixed-oily)

- Fitzpatrick photo-types

4.3. Efficacy verification

Descriptive statistics were provided for the efficacy questionnaire at Week 1 by four treatment groups according to criteria nature:

– For efficacy questionnaire, only the data of completing subjects were analyzed. Questionnaire response options were in the form of a 4-point semi-structured scale, ranging from one (1) to four (4), where the score of one (1) was the most negative/unfavorable rating and the score of four (4) was the most positive/favorable rating. The results with percentage of each rating for each item and total percentage of ratings from 3 to 4 ("top 2 box %") defined as percentage of satisfaction were calculated.

5. ADVERSE EVENT REPORTING

There was no adverse event/serious adverse event occurred in this study.

The definition of adverse event

Adverse events can be any adverse events and accidents, symptoms or diseases which can be associated with research products or not related to research products.

The definition of serious adverse event

A serious adverse event is any adverse medical event:

- Cause of death
- Life risk
- Hospitalization or prolonged hospitalization
- Persistent or severe incapacity or incapacity to work
- Congenital malformation/defect

6. PROTOCOL AMENDMENT/DEVIATION

There was no protocol amendment occurred in this study.

7. RESULTS

7.1. Demography

44 female subjects with a mean age of 41.50±8.35 years old completed the 1-week study.

7.2. Results of Questionnaire

A self-assessment questionnaire on product efficacy, performance and skin perception has been answered by each subject at Week 1.

Questionnaire response options were in the form of a 4-point semi-structured scale, ranging from one (1) to four (4), where the score of one (1) was the most negative/unfavorable rating and the score of four (4) was the most positive/favorable rating. The results with percentage of each rating for each item and total percentage of ratings from 3 to 4 ("top 2 box %") defined as percentage of satisfaction have been calculated.

Percentage of satisfaction (%) = total percentage of « 4-agree » and « 3-agree somewhat »
